

ADAPT Parasol Wins Best New Product Award at MCEE

ADAPT Parasol has won in the Best New Product competition in the “heating and/or cooling hydronic appliances” category at the MCEE in Montreal, Canada’s largest exhibition for the mechanical and electrical industries, in April 2015.

This latest award joins a number of accolades received worldwide by Swegon’s Parasol comfort module family. Soon after its launch in 2007, the Parasol won the Great Indoor Climate Prize in Sweden and later received recognition at the GAIA Awards in Dubai. In 2014, the newer, intelligent version of the product, ADAPT Parasol, became one of the finalists for the “Air Movement Product of the Year” Award in the UK.

“The MCEE award is naturally an important verification that our efforts to develop the indoor climate business is well-received by the market,” says Jonas Åkesson, Product and Market Manager at Swegon. He continues, “More and more professionals discover how ADAPT Parasol creates an energy efficient and comfortable indoor climate. When adding the other parts of Swegon’s product range, unbeatable combinations are created which facilitates the whole building process.”

We are very excited by the new award for ADAPT Parasol and believe it reflects the product’s growing success in the North American HVAC community. The recognition ADAPT Parasol is getting will help us gain the confidence of consultants and owners, thereby propelling the adoption of chilled beam technology for more projects in the US and Canada.

About ADAPT Parasol

The Adapt Parasol enables consultants to achieve demand control ventilation with chilled beam systems. The integrated damper and intelligent controls allow for significant turndown during unoccupied periods without losing the induction rate, which is the problem when combining chilled beam systems with VAV.
